

**Table II**

**Relationship between Birth Weight and Risk of Shoulder Dystocia  
in Babies of Diabetic and Nondiabetic Mothers**

| <u>Estimated fetal weight</u> | <u>Nondiabetic mothers<br/>% shoulder dystocia</u> | <u>Diabetic mothers<br/>% shoulder dystocia</u> |
|-------------------------------|--|---|
| < 4000 g                      | 1.1%   | 3.7%  |
| 4000-4499 g                   | 10.0%  | 30.6%   |
| >4500 g                       | 22.6%  | 50%   |
